

Business Case: Flagstaff Water Services reduced gas safety compliance management time by 70% while increasing gas safety awareness with Safety io Grid Fleet Manager service.

Who is the Flagstaff Water Services?

Flagstaff Water Services provide water, wastewater and stormwater services to over 76,000 people in Arizona.

.....

“With Safety io Grid services, my team and I are informed about and – more importantly – in control of our detection program. It’s easy, flexible, and available whenever and wherever we need it, so we act quickly to keep our staff safe.”

Jim Huchel,
Water Reclamation Manager at
Flagstaff Water Services

The Situation

Flagstaff Water Services is a long-time satisfied MSA gas detection customer, but managing, learning from and reporting on data from those detectors was unwieldy, inefficient and ultimately ineffective.

The Opportunity

Flagstaff Water Services needed to streamline their gas safety program management, especially:

- detector maintenance and usage
- compliance and incident reporting
- recordkeeping to OSHA standards

The Solution

Flagstaff Water Services adopted Safety io Grid Fleet Manager. Now, all their detector fleet information is available in their web-based Grid account, providing them with fast, secure access – anytime, anywhere – to compliance, maintenance and incident data.

The Results

With Grid Fleet Manager, the Flagstaff Water team:

- Reduced their detection data management time by 70%.
- Proactively handled detector compliance and maintenance.
- Used alarm and compliance data to improve their safety procedures.
- Were confident that their colleagues were protected by detectors that were ready for work.

This story is not unique.
